# **A Statistical Report on DWI in New Mexico**

## **Prepared by the Administrative Office of the Courts**

### **Introduction**

This report consists of New Mexico Driving While Intoxicated (DWI) dispositional information from 1997 through 2006, for New Mexico magistrate courts, district courts, municipal courts, and the Bernalillo County Metropolitan Court. It includes breakdowns by disposition type and case dismissal status. The methods used to derive the statistical information in the report were reviewed by the Division of Government Research at the University of New Mexico for methodological validity.

### **DWI Overview**

Since 1996, magistrate courts, statewide, handled between 6,500 and 7,500 DWI cases each year. Approximately 13% of these cases were transferred to district courts as felony cases. On average, 77% of the defendants in the remaining cases were convicted, acquitted or conditionally discharged. The other 23% of cases were dismissed, most as a result of motions filed by prosecutors.

During calendar year 2006, DWI cases were adjudicated by all courts in New Mexico. District courts throughout the state disposed of 2,350 felony DWI cases, magistrate courts disposed of 7,542 misdemeanor DWI cases, and the Bernalillo County Metropolitan Court disposed of 5,940 misdemeanor DWI cases. In addition, 1948 DWI cases were charged under municipal ordinances and disposed in municipal courts. For 2006, 82.7 percent of district court DWI defendants were convicted and 69.4 percent of magistrate defendants were convicted. Conviction rates for Bernalillo County Metropolitan Court and New Mexico municipal courts were 69.1 percent and 83.6 percent, respectively. The 2006 conviction rates for magistrate and district courts fell slightly, and the rate for the Bernalillo County Metropolitan Court, increased from 64.2 percent in 2005, to 69.1 percent in 2006. At least in part, the conviction rate increases at the Metropolitan court were due to improved case tracking capabilities.

The numbers in the 2005 DWI Report indicated that the rate of prosecutor-initiated dismissals increased over time and this trend continued in 2006. Prosecutor dismissals in magistrate courts, where the bulk of New Mexico DWI cases are tried, increased from 21.7 percent in 2005 to 25.3 percent in 2006, for an almost 15 percent increase in just one year.

In the 2005 DWI Report it was noted that part of the increase in prosecutor dismissals, over time, could be attributed to improvements in the quality of data entry between 1997 and 2005. Between 2005 and 2006, however, there were no significant changes in court data entry practices so the increase in prosecutor-initiated dismissals for that period cannot be attributed to data entry improvements.

## **The DWI Court Process**

At the same time, court ordered dismissals in magistrate courts decreased by 25 percent; however, the number of such dismissals for both years was very small — 1.6 percent in 2005 to 1.2 percent in 2006. This illustrates that contrary to public perception judges rarely summarily dismiss DWI cases. Other types of magistrate court related dismissals also declined. For example, the magistrate court rate of DWI dismissals under the six month rule declined from 1 percent to .9 percent, for a 10 percent decrease.

The trend towards increased prosecutor dismissals could possibly indicate that prosecutor resources are strained or that the quality of cases brought to court by law enforcement has declined, or both. When AOC staff conducted field visits in 2005 to observe DWI procedures, it was observed that prosecutor resources are short and that despite the best efforts of individual prosecutors, the sheer volume of DWI cases made their jobs a difficult juggling act. Other factors that might cause increases in prosecutor initiated dismissals in magistrate courts include the refile of misdemeanor cases as felony cases in district courts subsequent to prosecutor misdemeanor dismissals; unavailability of a key witness or piece of evidence; unavailability of a defendant due to death or incarceration; or procedural legal issues.

As in most states, the New Mexico DWI court process is complex. At present, district courts, magistrate courts, municipal courts and the Bernalillo County Metropolitan Court hear all DWI cases. Preliminary hearings on misdemeanor cases upgraded to felonies will likely first be heard in a magistrate court or the Bernalillo County Metropolitan Court, and then be transferred to a district court. These transfers, called “bind-overs,” are not dismissals, but are a means of transferring the most serious cases from limited jurisdiction courts to courts that have the ability to try felonies. Since 1997, the bind-over rate has fluctuated between 8.5 and 14.5 percent.

Cases initially filed in magistrate courts or the Bernalillo County Metropolitan Court are frequently dismissed as a result of a prosecutor's dismissal motion, particularly when prosecutors learn of prior cases or other information that lead them to believe that the case should be charged as a felony. Unfortunately, when cases are dismissed in lower courts and refiled as felony DWI cases in district courts, it is very difficult for the AOC to know that the case has been refiled since there is no linkage between the dismissed case and a later felony filing. These cases are not truly dismissed, but for the purposes of this report, they are counted as dismissals. This causes the overall dismissal rate to appear higher than it really is, which slightly distorts the overall DWI disposition picture.

Past site studies at magistrate courts have shown that many DWI cases that are counted as DWI non-convictions actually contain convictions on underlying non-DWI traffic charges. This frequently results when a person is stopped by police for a

traffic infraction and the police officer smells alcohol or observes that the driver appears intoxicated. When the police officer charges the driver with DWI the general practice is to also cite the driver for the offense that initiated the traffic stop. If the DWI charge is ultimately dismissed, the judge may still convict on the underlying traffic charge.

A very small percentage of DWI cases had a sentence of “deferred,” pending satisfactory completion of court-ordered treatment or other court-ordered interventions. For purposes of this report, these cases were counted as convictions since the offenders were sanctioned and many were subsequently sentenced to greater sanctions when they failed to abide by the conditions of their deferrals.

## **Efforts to Improve the DWI Process**

As noted in the 2005 DWI Report, the Judiciary has taken significant action to ensure that DWI cases are heard on the merits of each case, and significant actions have been taken to address DWI problems. During 2006, several new steps were initiated to increase judicial effectiveness including the broadcast of DWI expert training over the Judiciary's video arraignment network to magistrate judges, and formal mentoring programs and legal training, with testing, for new magistrate judges. In addition, the AOC has developed new computerized methods for providing timely feedback to clerks and judges on proper DWI case procedures.

Now pending are significant procedural rule changes for handling DWI cases at the Bernalillo County Metropolitan Court. If adopted, these changes should greatly reduce DWI dismissals in the one court that has the greatest DWI volume in New Mexico.

## **Statistical Differences**

Court statistics are not in complete agreement with statistics derived from data provided by the MVD to the New Mexico DWI Resource Center. The reasons for this are three-fold:

1. The MVD relies mostly on manual reporting for its data. Dispositions reported on paper are manually entered into the MVD system and may be either entered incorrectly, under-reported to MVD by the courts disposing of DWI cases, or lost during the manual transfer process. The figures provided in this report are derived from a transaction-based court case management system that captures all case initiations and dispositions as they occur, which helps ensure data completeness, timeliness and accuracy.

2. The statistics contained in this report were not derived by comparing arrests with dispositions in a single year since a DWI case is not always adjudicated in the same year that the case was initiated. In contrast, DWI Resource Center statistics are calculated by comparing all DWI arrests for a particular year with all court dispositions for that same year. On average, a DWI case will take 109 days to complete in magistrate court, and 251 days in district court, thus many DWI arrests for a

particular year will actually be disposed in a later year. Because DWI dispositions frequently do not occur in the same year as the underlying arrest, court dismissal figures will never entirely agree with statistics published by the DWI Resource Center, which are derived from the MVD system.

3. Any DWI arrest that is not formally charged as a DWI by a prosecutor and filed with the court will not be factored into the court statistics. It is possible for a DWI arrestee to be released by the arresting police agency without being charged. Such releases may be counted as non-convictions by MVD. Of course, the courts do not receive arrest information unless the alleged offender is formally charged; therefore, formal charging is used by the Judiciary to indicate the initiation of a new DWI case.
